Google's AI chatbot Bard makes factual error in first demo

On Monday, Google announced its AI chatbot Bard — a rival to OpenAI's ChatGPT that's due to become “more widely available to the public in...

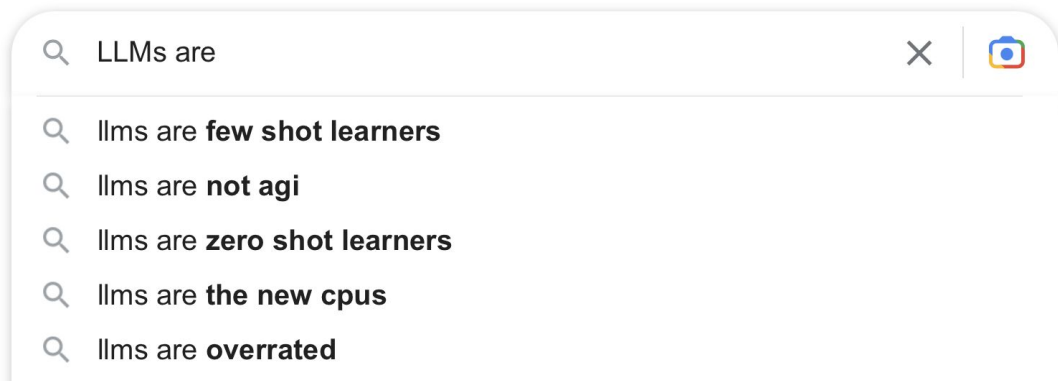

Feb 8, 2023

Background

What's an LLM?

- Large Language Model (**LLM**): predict the **next** word using previous words as context

LLMs as knowledge bases

- LLMs can retrieve **factual associations** in training data

Query	Answer	Generation
Francesco Bartolomeo Conti was born in ____.	Florence	Rome [-1.8], Florence [-1.8], Naples [-1.9], Milan [-2.4], Bologna [-2.5]
Adolphe Adam died in ____.	Paris	Paris [-0.5], London [-3.5], Vienna [-3.6], Berlin [-3.8], Brussels [-4.0]
English bulldog is a subclass of ____.	dog	dogs [-0.3], breeds [-2.2], dog [-2.4], cattle [-4.3], sheep [-4.5]
The official language of Mauritius is ____.	English	English [-0.6], French [-0.9], Arabic [-6.2], Tamil [-6.7], Malayalam [-7.0]
Patrick Oboya plays in ____ position.	midfielder	centre [-2.0], center [-2.2], midfielder [-2.4], forward [-2.4], midfield [-2.7]
Hamburg Airport is named after ____.	Hamburg	Hess [-7.0], Hermann [-7.1], Schmidt [-7.1], Hamburg [-7.5], Ludwig [-7.5]

Petroni et al. (2019), “Language Models as Knowledge Bases? (ACL)

“The more data, the better. But **what’s available to train a model varies widely across** the thousands of **languages** used today.”

–Viorica Marian, director of the Bilingualism and Psycholinguistics Research Lab at Northwestern

Research Question

How well do LLMs retrieve facts in **different languages**?

Approach

The “Polyglot or Not?”
Fact-Completion Test

Contrastive Knowledge Assessment

<i>Prompt:</i>	Paris	is	the	capital	of
<i>Token ids:</i>	7270	83	70	10323	111

Transformer
(Language Model)

Prediction probs:

0.12

0.01

0.61

Spain

vs.

France

Test dataset: 303k facts across 20 languages

True statements ✓ and counterfactuals ✗

English: Sundar Pichai works for

- **Google** ✓ vs. **Apple** ✗

French: Sundar Pichai travaille pour

- **Google** ✓ vs. **Apple** ✗

Ukrainian: Сундар Пічаї працює в

- **Google** ✓ vs. **Apple** ✗

Results and Analysis

Multilingual Leaderboard (20 Lang Average)

Figure: Meta's LLaMa-30b outperforms other multilingual foundation models by a large margin across 20 languages

LLaMa-30B Multilingual Performance

Figure: LLaMa-30b scores higher on languages written in Latin script than those written in Cyrillic script (Ukrainian, Bulgarian, Russian and Serbian) ($p < 0.001$).

Accuracy (%) →

Impact

**“The most powerful models will be trained on about 20
‘high-resource languages’**

**‘All we have data, the secret. But what’s available mostly in
those languages widely across the species, such as dominant
languages drive out languages for which fewer
resources exist.’**

*–Viorica Marian, director of the Bilingualism and
Psycholinguistics Research Lab at Northwestern*

Takeaways

Project

- **Size + robustness of training data** outweighs # of model parameters for fact-completion.
- This is the **first counterfactual + multilingual** knowledge assessment for open-source LLMs.

Personal

- **Overcoming setbacks** and work within **limitations**
- **End-to-end, collaborative research** – I School style!

Why couldn't we study GPT-3/4/Chat-GPT?

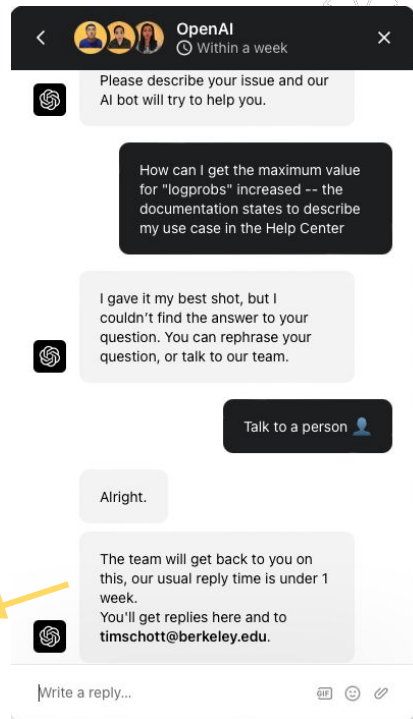

- OpenAI's models are closed-source, and the API for GPT-3 does not support our CKA method.
- We can't see all the probabilities for the tokens their models predict, as CKA requires.

logprobs integer Optional Defaults to null

Include the log probabilities on the `logprobs` most likely tokens, as well the chosen tokens. For example, if `logprobs` is 5, the API will return a list of the 5 most likely tokens. The API will always return the `logprob` of the sampled token, so there may be up to `logprobs+1` elements in the response.

The maximum value for `logprobs` is 5. If you need more than this, please contact us through our [Help center](#) and describe your use case.

You don't need to be a data scientist to predict if I got a response..

English-only Test Leaderboard

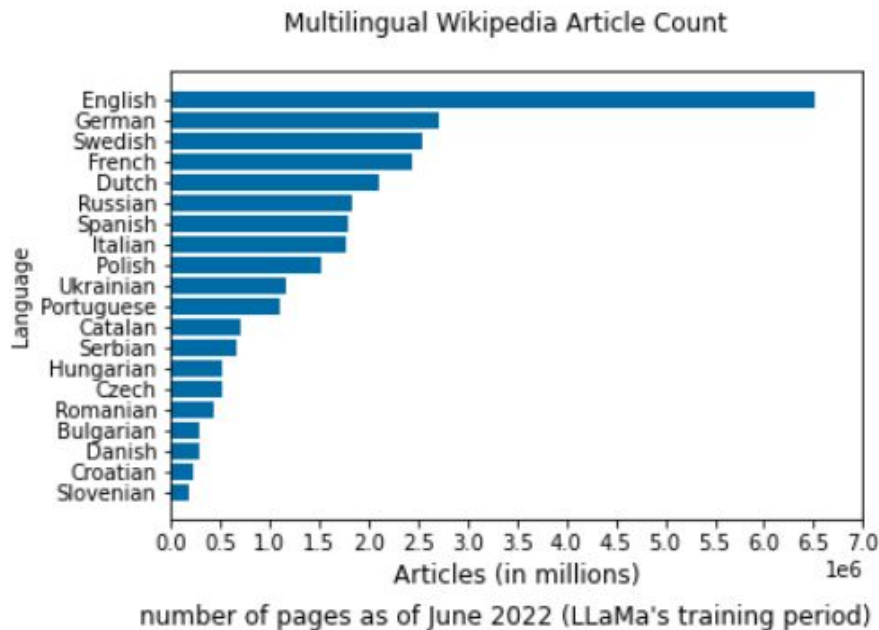

Accuracy (%) →

Future Directions

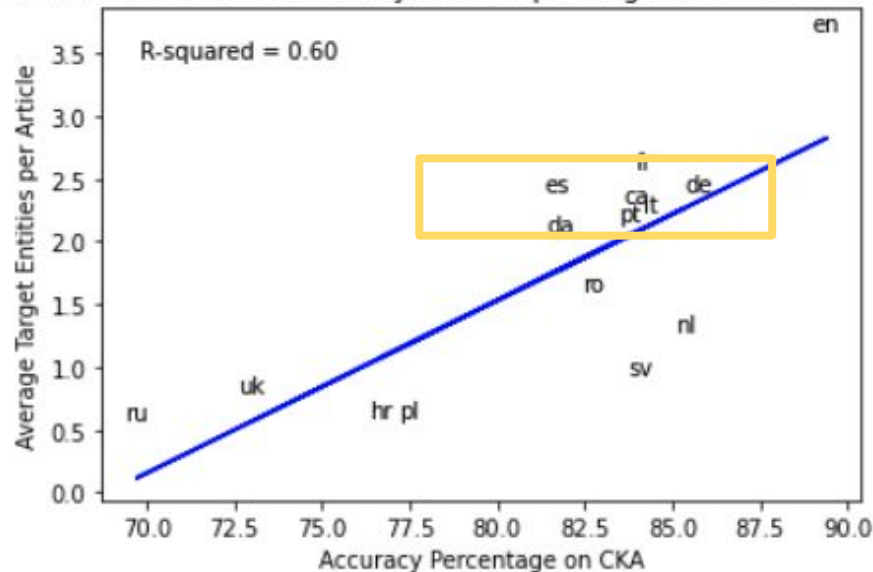

- Vocabulary-wide probabilities for close sourced inference?
- Evaluating more open-source families as they are released by
- Additional error analysis with new types of metadata
- Increasing size + adding more languages to test dataset
- Model editing (MEMIT) in a multilingual setting

How big is wikipedia, per language?

Data Quality > Data Quantity

Correlation between Accuracy and Unique Target Entities on Wikipedia

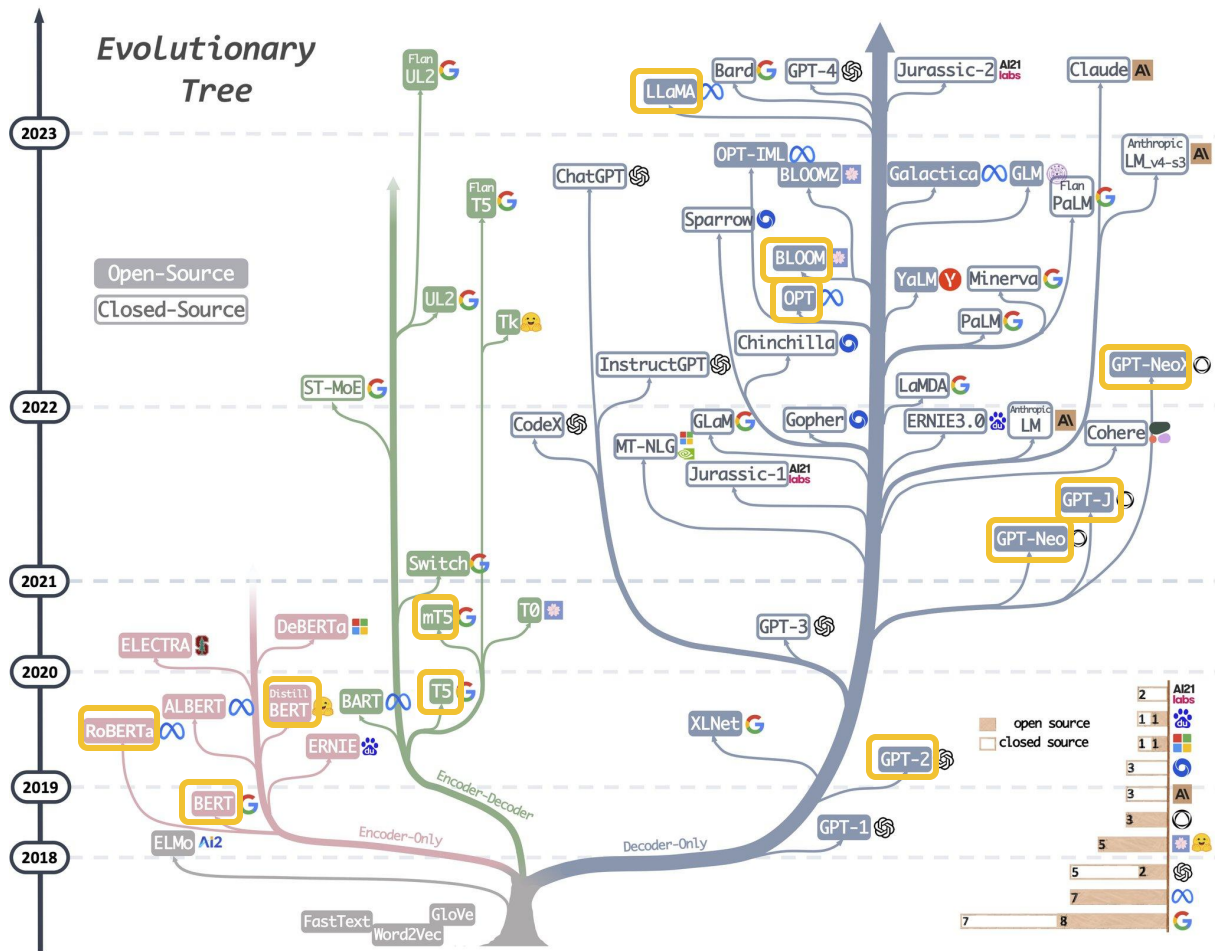

Why CKA?

Why not look at top predicted tokens?

- Examining the contrast allows us to quantify the confidence level
- Sometimes, there are multiple right answers, some of which are not present in top tokens
- High probability counterfacts provide insights about model

LLMs Included

20 foundation LLMs are including in our project's results

Almost every “massive” LLM is closed source

Name	Release date ^[a]	Developer	Number of parameters ^[b]	Corpus size	License ^[c]	Notes
GPT-4	March 2023	OpenAI	Unknown ^[f]	Unknown	public web API	Available for ChatGPT Plus users and used in several products .
GLaM (Generalist Language Model)	December 2021	Google	1.2 trillion ^[42]	1.6 trillion tokens ^[42]	Proprietary	Sparse mixture-of-experts model, making it more expensive to train but cheaper to run inference compared to GPT-3.
PanGu-Σ	March 2023	Huawei	1.085 trillion	329 billion tokens ^[65]	Proprietary	
PaLM (Pathways Language Model)	April 2022	Google	540 billion ^[48]	768 billion tokens ^[47]	Proprietary	aimed to reach the practical limits of model scale
Minerva	June 2022	Google	540 billion ^[52]	38.5B tokens from webpages filtered for mathematical content and from papers submitted to the arXiv preprint server ^[52]	Proprietary	LLM trained for solving "mathematical and scientific questions using step-by-step reasoning". ^[53] Minerva is based on PaLM model, further trained on mathematical and scientific data.
Megatron-Turing NLG	October 2021 ^[36]	Microsoft and Nvidia	530 billion ^[37]	338.6 billion tokens ^[37]	Restricted web access	Standard architecture but trained on a supercomputing cluster.
Gopher	December 2021	DeepMind	280 billion ^[43]	300 billion tokens ^[44]	Proprietary	
Ernie 3.0 Titan	December 2021	Baidu	260 billion ^[38]	4 Tb	Proprietary	Chinese-language LLM. Ernie Bot is based on this model.
GPT-3	2020	OpenAI	175 billion ^[10]	499 billion tokens ^[29]	public web API	A fine-tuned variant of GPT-3, termed GPT-3.5, was made available to the public through a web interface called ChatGPT in 2022. ^[31]
OPT (Open Pretrained Transformer)	May 2022	Meta	175 billion ^[49]	180 billion tokens ^[50]	Non-commercial research ^[d]	GPT-3 architecture with some adaptations from Megatron
